ABOUT

Innotech Windows + Doors was established at the turn of the century with the vision of manufacturing German engineered windows and doors that reach beyond industry standards. Today, we are proud to offer our customers a full line of high performance, energy efficient and long lasting windows and doors that are specifically designed and tested for our North American climate, building codes and energy requirements.

WINDOWS

Passive House Certified Windows

The Defender 88PH System combines decades of fenestration knowledge to deliver a robust window system that is Passive House Institute (PHI) certified.

Our Passive House windows are manufactured in Canada for North American Passive House projects.

Picture Windows

Innotech windows are engineered for extra large openings. Whether you want to flood your home with natural light or want uninterrupted views from every space, our picture (or fixed) windows push beyond traditional size boundaries – without compromising structural integrity, energy efficiency or performance.

Tilt + Turn Windows

Innotech tilt and turn windows achieve exceptional energy efficiency, air tightness, water resistance and sound control. Innovative and easy to operate European windows also provide excellent natural ventilation, high levels of security and are conveniently easy to clean.

DOORS

Entry Doors

Our custom designed entry doors create memorable first impressions without compromising on performance and safety. Available as single or double doors with or without windows, with solid or glass panels, and in your choice of size and colour, our entry doors are ideal for your home's front, side or back entry doors.

Lift + Slide Doors

The Lift and Slide Door is engineered for extra large openings to offer unobstructed views, seamless indoor-outdoor living, and abundant natural light- all without compromising our signature ease of operation, security and performance.

Folding Doors

Our Folding Doors provide good thermal insulation to maintain consistent indoor temperatures. They are easy to operate to allow homeowners to effortlessly open and close the doors. Create bright and comfortable indoor living spaces that easily open up to your backyard.

DOORS

Tilt + Glide Doors

Designed for larger door openings, Innotech Tilt and Glide Doors combine performance and ventilation. With outstanding air tightness, sound protection and water resistance, tilt and glide doors give you the convenience and security of tilt ventilation with a smooth gliding operation.

Tilt + Turn Doors

Tilt and Turn Doors are patio doors that open two ways: they can tilt like our Tilt and Turn Windows or swing open like our Terrace Swing Doors. Tilt and Turn Doors provide the convenient option to partially open your patio doors to ventilate your home without compromising your home's security, making them suitable for areas in a home where you may need additional secure ventilation.

Terrace Swing Doors

We invite you to rediscover patio doors with our high-performance Terrace Swing Doors. Ideal for renovations and new construction, our Terrace Swing Doors combine superior energy performance, outstanding durability, high security and elegant design.
